## 第 377 次獸醫組織病理會議

The Three Hundred and Seventy-Seventh (377th) Histopathology Seminar

Date: Sep 4 , 2020

Time: 10 : 30~16 : 00

Place: AHRI

**Case 1. CSVP 2020-3073 (NTU2020-712B, NTU GIMCP, C.H. Shih, C.F. Lee, W.T. Chen, Y.H. Hsieh, Y.F. Jiang, H.W. Chang, and Y.C. Chang)**

Oriental turtle doves (*Streptopelia orientalis*), adult, passed away one after another without apparent clinical signs since April.

**Case 2. CSVP 2020-3074 (NTU2019-3329, NTU GIMCP, Y.C. Lai and W.H. Huang)**

Feline, 11-year-old, mongrel, neutered male. The mass at the tip of the tongue was noted 2 months ago, and it got bigger gradually.

**Case 3. CSVP 2020-3075 (CD20024, ADDC NCYU, M. Huang, H.C. Kuo, C.L. Chen, M.H. Chang, and D.Y. Lo)**

Hy-Line layers, 41 to 45-week-old, showed clinical signs of green diarrhea and decrease egg production (from 75 % to 63 %) since one week ago. The mortality rate was 0.075 % (15/20,000).

**Case 4. CSVP 2020-3076 (WA109-084, ADDC NPUST, J. H. Lin, J. A. Yang, and Y. C. Li)**

Black swan, over 10 years old, right wing and pelvic limb were found unfunctional on 5/3. Depression, emaciation, and severe pododermatitis on both pelvic limbs were also noted, with an elevation in AST and decrease in PCV, TP and Ca were recorded.

**Case 5. CSVP 2020-3077 (CS20-03164, GIVP NCHU & ADDC NCHU, Y.C. Chang, J.W. Liao, H.Y. Chiou)**

Meerkat (*Suricata suricatta*), adult, male. The owner claimed that the adult meerkat kept with another conspecific was found reluctant to move 1 day before its death. At necropsy, whitish, soft, 2 cm in diameter mass located at right suprarenal region was found.

**Case 6. CSVP 2020-3078 (CS20-03165, ADDC NCHU, Y.C. Chang, S.L. Chang, Y.X. Lin, H.Y. Chiou, and J.W. Liao)**

Feline, 5-month-old, Ragdoll, intact male, showed clinical signs of sneezing and lacrimation. At necropsy, ascites, discoloration and rough-surfaced with white to yellow dots of bilateral kidneys were noted.

**Case 7. CSVP 2020-3079 (2020-366-10, 2020-367-14, 2020-367-18, AHRI, Y.C. Tu, W.C. Hsu, S.C. Hu, and Y.W. Chen)於專題演講進行病例報告及討論**

Cattle, Brangus Bull, 6-year-old. Randomly extensive distribution of nodules in the skin was noted. The nodules were characterized by well-circumscribed, firm, round and raised, some of which contained a characteristic lesion of necrotic center with cone shape and flat topped (sit-fast).
